

let us help you

SIZE up your situation

One in nine women will develop breast cancer. Most women do not feel a lump in their breast until it is the size of a raspberry. With a mammogram, we can detect a lump in your breast when it is as small as a blueberry. By taking a few minutes for a simple mammogram, we can help you size up your situation.

**Receive a free compact mirror when you schedule or receive a mammogram in October 2005.*

GASLIGHT IMAGING CENTER
